ABOUT ME

Motivated Information Technology student at AlQuds University with a rooted interest in software development, cybersecurity, and AI. Currently interning as a Software Developer at the Bank of Palestine, building real-world secure web solutions using modern technologies. Enjoy working in a team and solving real, impactful problems, with global experience exchanging knowledge with people from different parts of the globe.

TRAINING EXPERIENCE

Software Development Intern 12/2022 – Present
Bank of Palestine · Dual-study training (2 years in total) Palestine

- Rotated across multiple departments including Software Development, Networking, Database Management, and Information Security.
- Developed and maintained secure web-based applications using JavaScript, React, PHP, and TypeScript, adhering to code quality and reliability standards.
- Assisted in configuring and troubleshooting network devices, performing basic network diagnostics and documentation.
- Worked with SQL Server to write queries, manage data, and support database-driven systems.
- Collaborated with development teams in Agile environments and contributed to internal tools and APIs.

EDUCATION

B.Sc. in Information Technology 08/2022 – Present
AlQuds University Palestine

- Participated in Coding Clubs
- Hackathon Participations

Erasmus+ ICM Exchange Semester 04/2024 – 08/2024
Freie Universität Berlin Berlin, Germany

Tawjihi Certificate 07/2022
Zatra High School

SKILLS

- **Programming Languages:** C, C++, Java, Python, JavaScript, TypeScript, PHP
- **Web:** HTML5, CSS3, React, RESTful APIs
- **Databases:** SQL Server, MySQL
- **Systems Programming:** memory management, pointers, threading, concurrency
- **Secure Coding:** design patterns, refactoring, buffer overflows
- **CS Fundamentals:** data structures & algorithms, debugging
- **Tools:** Git, CI/CD, Jenkins, Visual Studio Code, Postman
- **Operating Systems:** Linux, Windows
- **Networking:** TCP/IP fundamentals, Cisco Packet Tracer
- **Machine Learning:** NumPy, Pandas, Matplotlib, Scikit-learn — preprocessing, training, evaluation
- **Ways of Working:** Agile teamwork, version control, code review

LANGUAGES

Arabic: Native · **English:** Fluent · **German:** Basic (A1)

PROJECTS

Nawa – Neural Network Inference Engine (C++) ***GitHub Repository***
Built a lightweight neural network inference engine from scratch in C++20 (no external math libraries): tensors, layers, a custom model format, and a runtime whose outputs match PyTorch. Optimized it for CPU with an AVX2 matrix-multiplication kernel, a thread pool, and INT8 quantization, reaching 97.15% accuracy on MNIST, with a command-line tool and a browser demo.

RAG AI Assistant ***GitHub Repository***
Built a Retrieval-Augmented Generation application that lets users chat with uploaded PDF documents and receive context-aware answers with source citations. Supports multi-document querying, comparison across files, and information synthesis using Python, LangChain, and ChromaDB, covering document ingestion, vector storage, and backend processing.

Network Projects (Packet Tracer) ***GitHub Repository***
Developed and published a collection of Cisco Packet Tracer projects demonstrating network design, configuration, and troubleshooting: VLANs, routing protocols (OSPF, EIGRP, BGP), DHCP, NAT, wireless networks, branch network simulations, data encryption, and cryptography. Focused on real-world scenarios and preparation for certifications such as CCNA.

AI Daily Report Automation ***GitHub Repository***
Built an n8n automation workflow that generates a short daily English report on practical uses of AI, exposes it through a JSON API, and emails it automatically every day at 3 PM. Uses scheduled workflows, webhook-based API access, AI-generated content, and email delivery, and is structured to extend to Telegram, Discord, or a frontend app.

React Dashboard
Built a modern dashboard UI using React, Vite, Material UI, and Nivo Charts, including interactive tables, role-based team management views, task tracking pages, FAQ panels, and visual analytics through bar, pie, and network charts. Designed with reusable components and mock data so it can connect to real APIs later.

Dual-Study-Student-Portal ***GitHub Repository***
Designed a portal to help dual-study students manage their training, courses, and documents during internships.
